

Decorative Panels

Morland is one of the UK's leading producers of wood-based decorative panels.

Our expertise and equipment, built up over decades, enables us to tailor cost effective products. We laminate panels for a broad spectrum of UK and European customers.

From high speed production of single sided decorative panels to the through feed of multi layer composite panels, we evaluate the application and purpose of the panel and then ensure that the right materials and adhesives are used.

We can be flexible on minimum order quantities, and can work on short lead times where materials are available.

As part of the Newmor Group we operate alongside Newmor Wall Coverings. Visit www.newmor.com to see the fabulous range.

We import quality materials from long term supply partners across the globe.

Our environmental policy prohibits the use of illegally logged timber and supports sustainable forestry. Morland has both FSC and PEFC certification for the purchase, processing, sales and distribution of certified timber.

Our quality management system operates to the ISO:9001 standard. We maintain a constant check on our output, rejecting panels where there is deviation from the control, enabling our customers to fit out with the confidence that the panel and the colour consistency has been professionally checked.

As part of our quality system we maintain records to provide "trace to origin" audit trails throughout our manufacturing process. Any item can be interrogated back to the mill that supplied the board or to the master control swatch for the decorative finish.

The choice of materials is yours but typically we work the items shown below.

Core materials	Coverings
Fibreboards	Paper Foils
Plywoods	PVCs
EPS/XPS/Polyurethane	Paper-backed Wallcoverings
Honeycomb	High Pressure Laminates

Edge Banding

We have the equipment to provide very high quality edgebanding to curved and shaped components. Tight internal and external radius's are possible subject to specification. We can apply up to 4mm ABS edgebanding to give an impact resistance second to none.
